

# Monitoring and Evaluation of Breast Health Initiative

**Dr Somesh Kumar**

Sr Director, Technical Leadership and Innovations  
Jhpiego

**Saving lives.  
Improving health.  
Transforming futures.**

# **Breast Health Initiative**

# Theory of Change

## Problem

- High disease burden; rising incidence; younger age group; high mortality
- Lack of awareness in the community
- Lack of knowledge and skills among service providers
- Fractured continuum of care

## Consequence

- **Late presentation**
- **Delayed diagnosis and treatment**
- Poor survival
- Absence of a well-defined care pathway

## Interventions

- **Breast Health Awareness in the community**
- **Clinical Breast Examination at Primary Health Care Level facilities**
- **Functional referral pathway**
- **Decentralization of diagnostics**
- Advocacy for Policy

## Outputs

- Well-functioning and scalable service delivery model of early detection services with strong referral pathways to timely diagnostic and treatment.
- Prioritization of breast health care in the agenda of policy makers in India.

## Outcomes

**Downstaging**  
**Reduced time-lag between presentation, diagnosis and treatment**

### Impact

- Reduced morbidity and mortality due to Breast Cancer in India.
- Allocation of needed resources for the breast health care

**Saving lives.  
Improving health.  
Transforming futures.**

## **Performance Indicators**

# Key Performance Indicators (KPI)

## Input Indicators

Indicators	Target
Proportion of targeted ASHAs/USHAs trained on breast health awareness	80%
Proportion of targeted service providers trained on clinical breast examination (CBE)	80%
Proportion of targeted MOs trained on clinical breast examination (CBE) & benign breast conditions/treatment	80%
Proportion of targetted Specialists trained on Imaging, Pathology & Procedures (Biopsy )	As per actual
Proportion of data handlers trained on data recording, reporting and compiling	80%
# of state technical advisory group meetings held	As per actual
# of learning resource packages developed	3
# of trainers trained through ToTs	As per actual

## Process Indicators

Indicators	Target
<b>Median time taken</b> by women from nomination by CHW to CBE	As per actual
<b>Median time taken</b> by women from CBE till reaching the diagnostic centre	As per actual
<b>Median time taken</b> by women from reaching the diagnostic centre to diagnostic evaluation	As per actual
<b>Median time taken</b> by women from diagnostic evaluation to initiation of treatment	As per actual
<b>Median time taken</b> by women from initiation of treatment to completion of treatment	As per actual

## Key Performance Indicators (contd)

### Output Indicators

Indicators	Target
Percentage of operational targeted facilities for early detection of breast cancer (CBE)	80%
Percentage of operational targeted facilities for diagnostic evaluation of breast cancer	80%
Proportion of ASHA/USHA who have conducted enumeration of target population	80%
Proportion of women who come to health facility for CBE	20%
Average number of CBEs performed per facility	As per actual

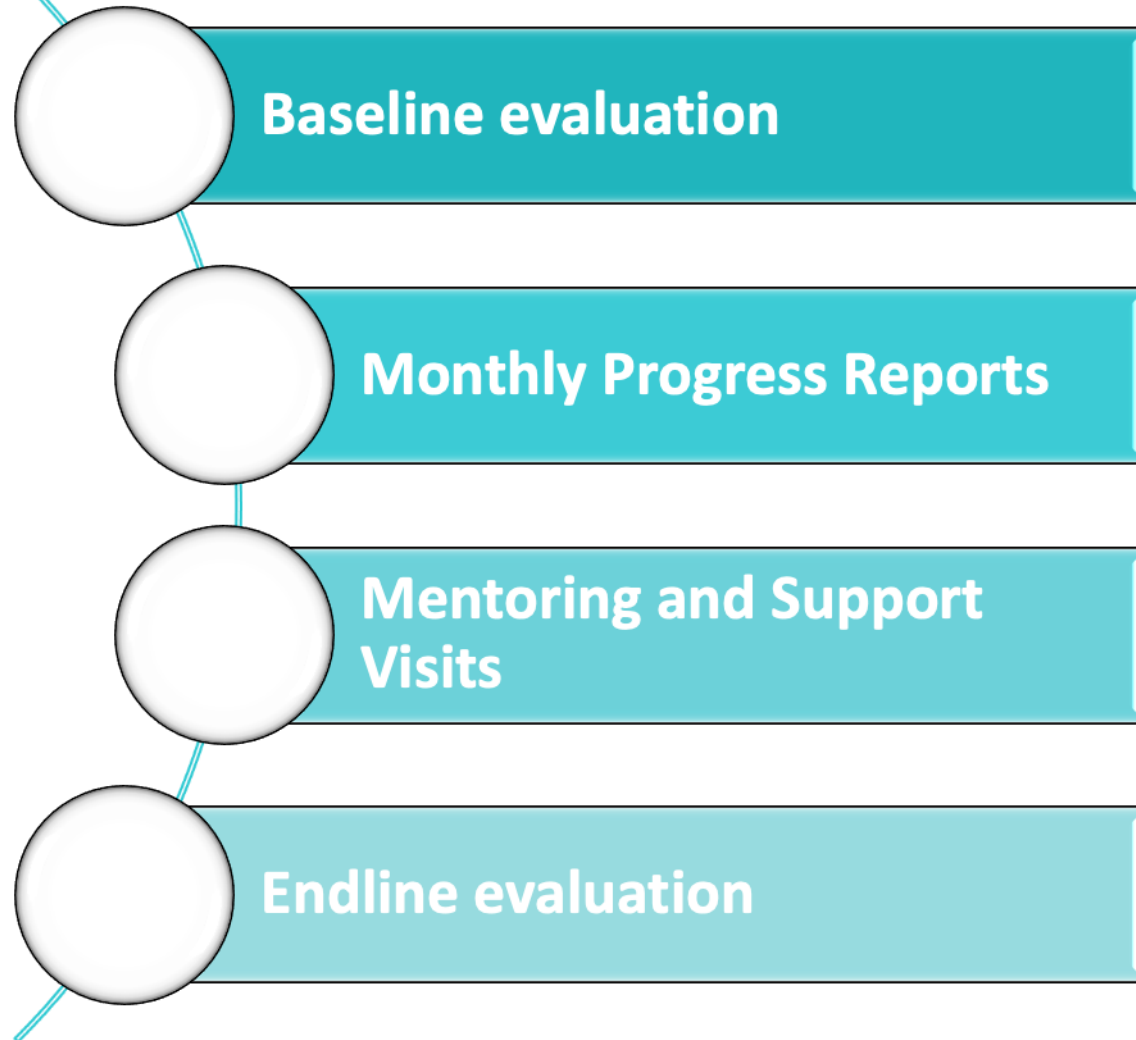

### Outcome Indicators

Indicators
Proportion of women referred for diagnostic evaluation after CBE
Proportion of women who underwent diagnostic evaluation
Proportion of women who were confirmed to have breast cancer through diagnostic evaluation
<b>Median size of breast lump of the women who are confirmed to have breast cancer</b>
Proportion of women who need to receive treatment for breast cancer
Proportion of confirmed cases initiated treatment
Proportion of confirmed cases completed treatment

**Saving lives.  
Improving health.  
Transforming futures.**

## **Measurement Tools**

## Processes

## Tools

- **Recording:** Enumeration Format, NPCDCS Screening register, CBE positive register, Diagnostic Register, Treatment Register
- **Reporting :** Monthly Reporting format
- **Referral:** Client referral slip, Client card

# Data Quality Assurance

---

- Data quality was closely monitored for each data collection/activity tracking process. Data collection was planned in a way that quality is ensured and checked at various points of the data collection and compilation process.
- **Data quality assurance steps:**
  - ✓ Development of standardised data tool with inputs from experts .
  - ✓ Field testing of tool
  - ✓ All data collectors will be oriented in a standardised manner.
  - ✓ Data entry will be done in formats with data validation checks/restrictions
  - ✓ 5-10% of data entered will be crosschecked for inconsistencies
  - ✓ Triangulation of data with different sources
  - ✓ Regular monitoring visits

# Learnings: Regular sharing of dashboard improves program performance

## BHI Data\_Entry\_Form

Name of State: **Uttar Pradesh**

Name of district: **Lucknow**

Name of Main Facility: **DWH**

Name of Facility: **VAB Hospital**

Facility Code: **UPLKOBV001**

Year: **2018**

Month of report: **Nov-18**

Date of Recieved: **26-11-2018**

1- No. of women who came to facility for CBE: **20**

2- No. of women with +ve CBE findings: **8**

3- No. of CBE+ve women referred to higher facility: **1**

4- No. of women with Lump or thickening inside the breast or underarm area: **6**

5- No. of women with Swelling, warmth, redness or darkening of the breast: **2**

6- No. of women with Change in size, shape of the breast: **1**

7- No. of women with Dimpling or puckering of skin: **2**

8- No. of women with Itchy, scaly sore or rash on the nipple: **0**

9- No. of women with Pulling in of nipple or other parts of breast: **2**

10- No of women with Nipple discharge: **1**

11- No. of women with New pain persistent in one spot: **5**

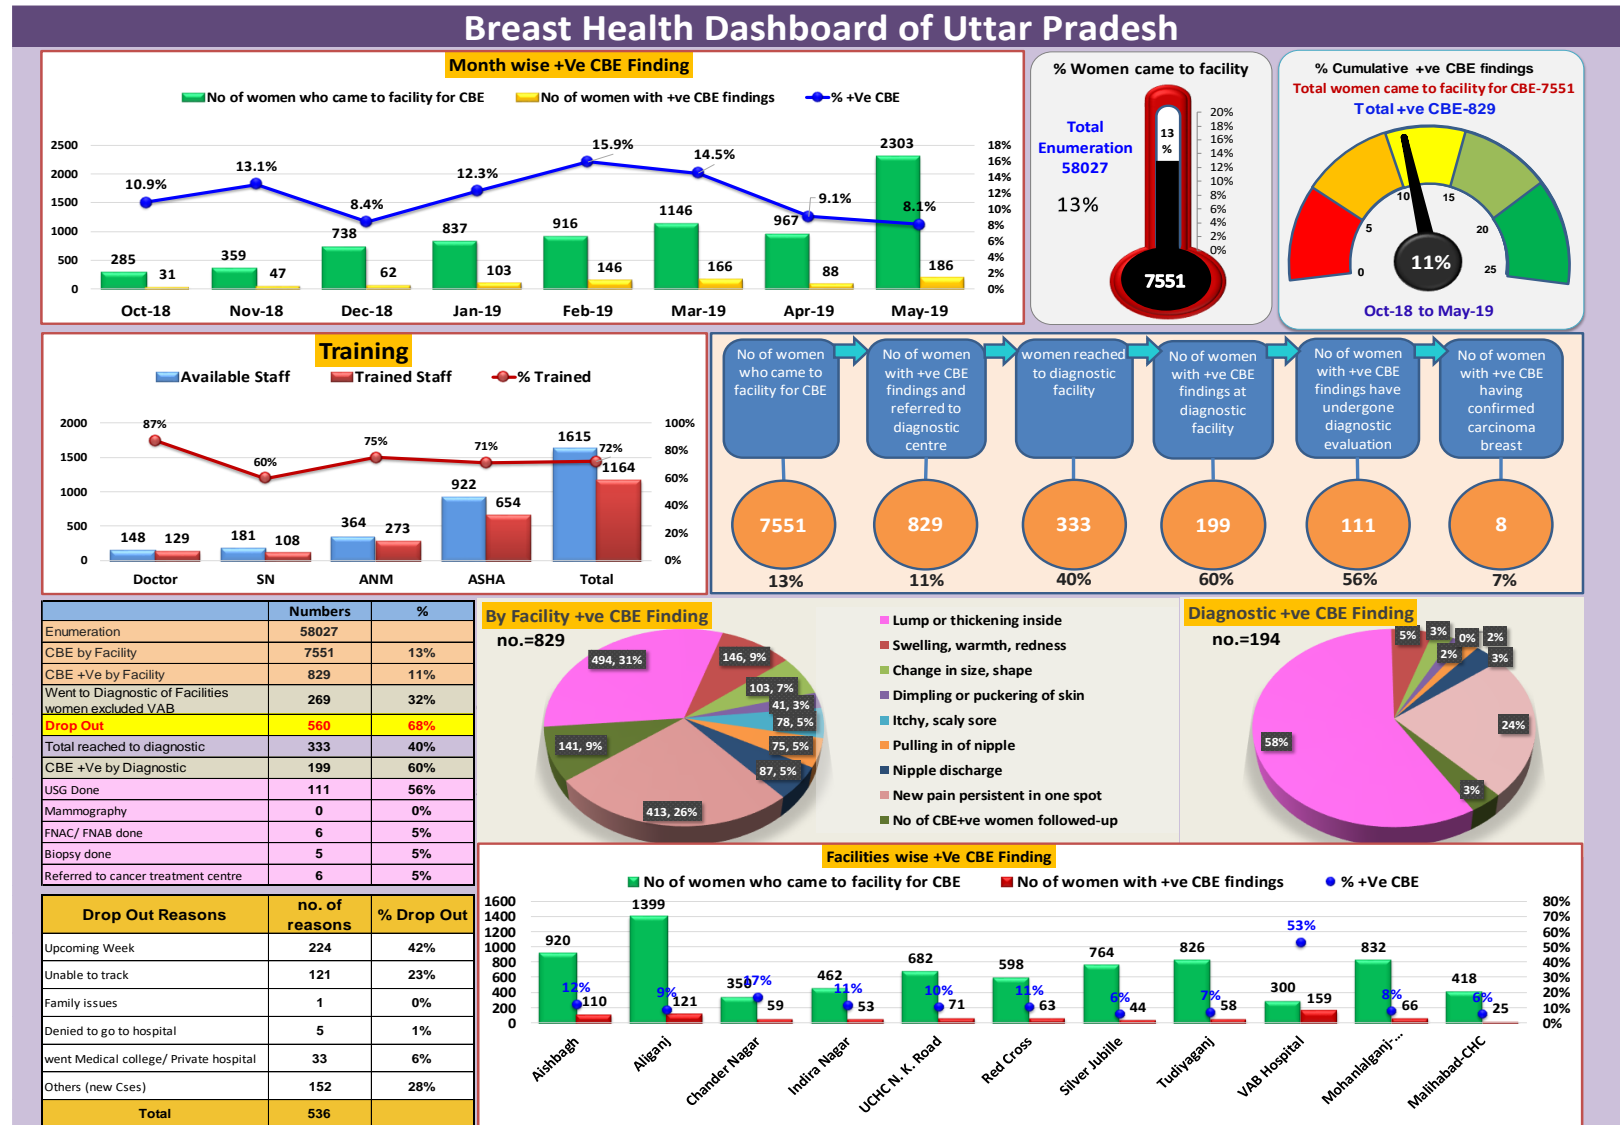

12- No. of CBE+ve women follow-up: **6**

# India BHI (by end of 2020) –NOT TO BE SHARED, UNDER PUBLICATION

# Learnings: Supportive Supervision Visits improve performance

## NOT TO BE SHARED, UNDER PUBLICATION

- Frequency of supportive supervision visits based on prioritization of facilities.
- The 25 facilities which received frequent supportive supervision visits (>5) showed improvement in CBE screening as per MPR data.

**Thank  
You**
