

ICCP and Partner Technical Resources for NCCP Implementation

ICCP ECHO
Session 5: Resource Sharing

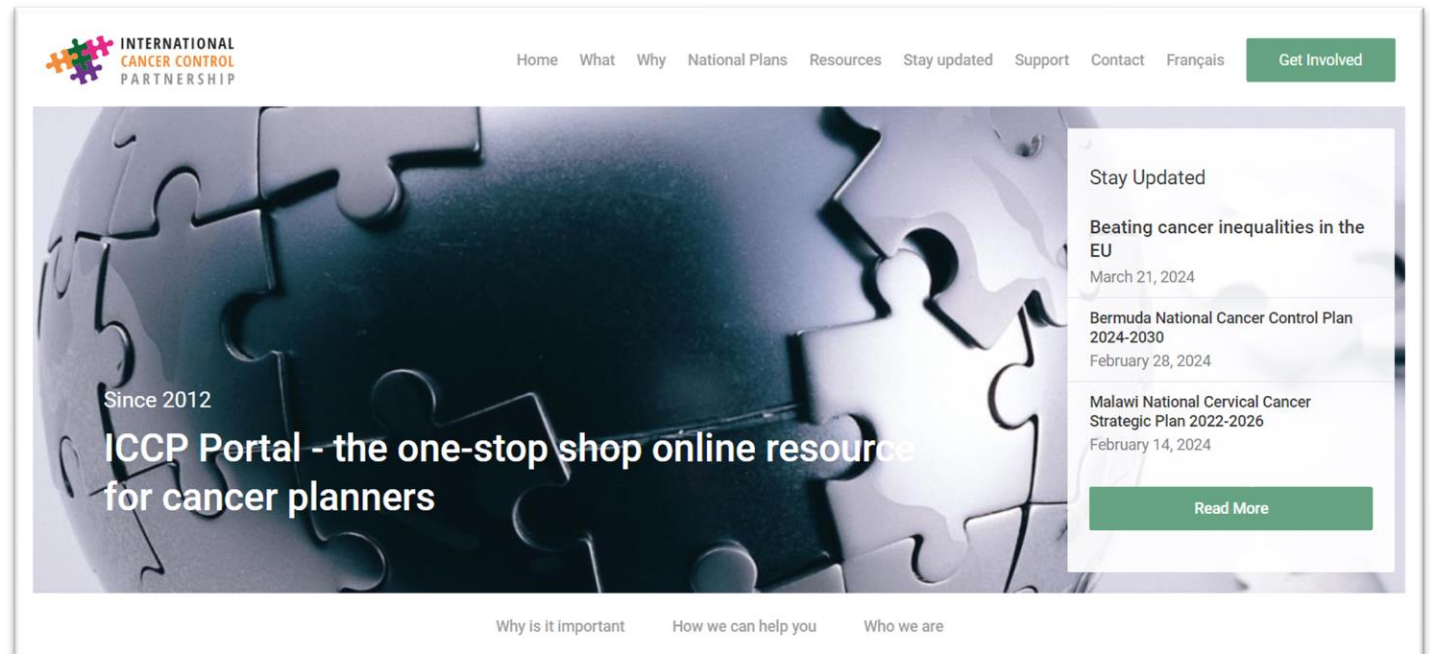

17/05/2024

uicc.org

International Cancer Control Partnership Portal

www.iccp-portal.org

- **An online one-stop shop for cancer planners and policy-makers**
- NCCP and NCD plans from all over the world
- More than 900 selected resources on planning and capacity-building for cancer control
- Global cancer initiatives and advocacy resources
- Since the launch, the portal has been visited by users from over 180 countries

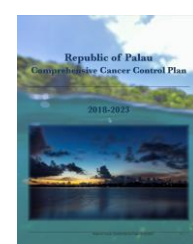

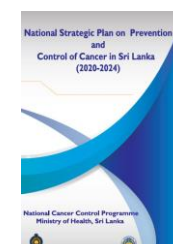

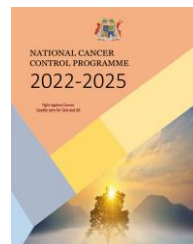

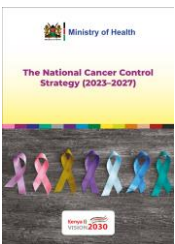

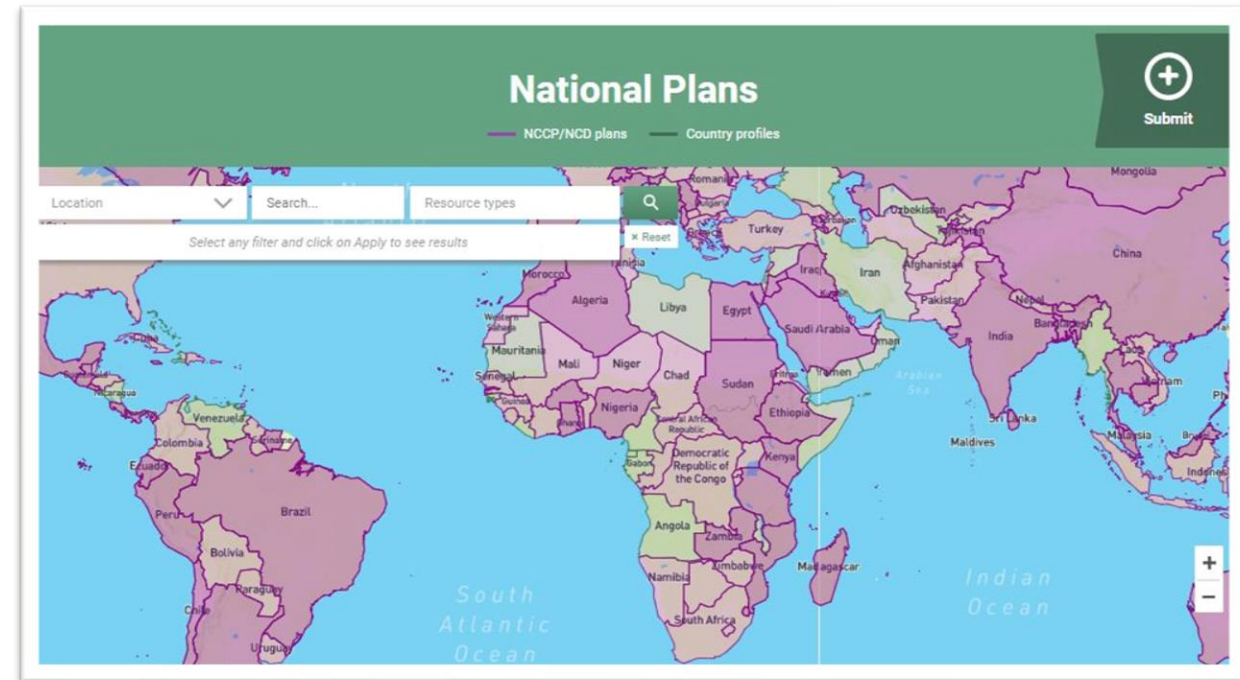

ICCP portal – NCCP & NCD plans

Regular monitoring of NCCP and NCD plans development globally

Total number of plans on the portal today:

- NCCPs: from 127 countries
- NCD plans: from 134 countries
- Previous plans, state, regional and site-specific plans – e.g. cervical or breast

NCCPs, NCD plans and country profiles

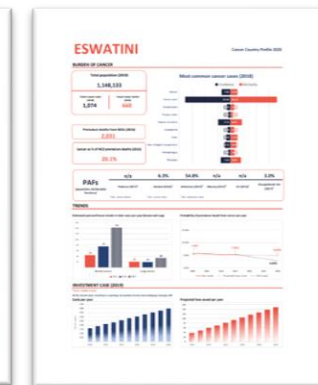

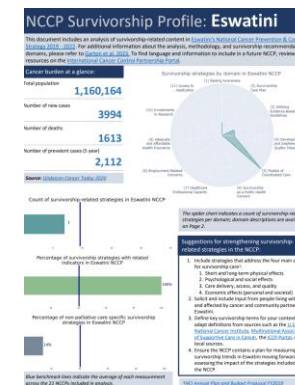

Types of resources available through the map

The screenshot shows a map interface titled 'National Plans'. At the top, there are two legend items: 'NCCP/NCD plans' (represented by a purple line) and 'Country profiles' (represented by a green line). Below the map, there is a search bar with 'Eswatini' selected, a 'Search...' button, and a 'Resource types' dropdown menu. A blue arrow points from the text 'Search by resource type: NCCP, NCD plan, Country profiles...' to the 'Resource types' dropdown. Below the search bar, there is a '6 results' indicator. The results list includes:

- NATIONAL CANCER PREVENTION & CONTROL STRATEGY 2019**
From 2019 to 2022 | Eswatini | Cancer plan
Download
- WHO - Cancer Country Profiles Eswatini 2020**
2020 | Eswatini | Country Profile
Download
- WHO - Cervical Cancer Profile Eswatini 2021**
2021 | Eswatini | Country Profile
Download
- Eswatini NCCP Survivorship profile**

At the bottom of the results list, there is a note: 'Please note that this is not an exhaustive list of national plans and, with your help, we hope to add more. For a list view: CLICK HERE'.

Search by resource type:
NCCP, NCD plan, Country
profiles (this includes WHO
cancer country profiles and
WHO cervical cancer
country profiles and NCCP
survivorship profiles – only
for African countries)

Diagnostics

Global Key Message

- An accurate and rapid diagnosis is required for cancer therapy. Throughout low- and middle-income countries (LMICs), patients and health workers lack access to diagnostic tools and educational resources that are instrumental to an effective cancer diagnosis.
- To achieve comprehensive cancer control it is essential to improve diagnostic capabilities for all patients and meet the gaps in LMICs where cancer mortality is highest.
- Cancer diagnostics requires trained personnel, routine and specialized reagents, laboratory equipment, standard operations procedures, ongoing quality management and standards/harmonization of process and reporting.

The Facts – Key Data

- In Sub-Saharan Africa (a region with high cancer mortality and a lack of diagnostics), it can take months for patients to receive a cancer diagnosis (if at all) after seeing a health care provider, which may lead to development of an advanced staged malignancy.
- A pathological confirmation of a malignancy is critical to a timely cancer diagnosis and initiation of proper treatment as well as crucial to the creation of national population-based cancer registries (less than 20% of the population have registries as of 2006), which enable experts to evaluate and improve diagnostic methods and treatment programs.
- Increased pathology capacity, as well as awareness of efficient diagnostic methods in both the anatomic and clinical pathology laboratories, is a necessary step to obtaining an accurate and timely pathological diagnosis in LMICs.

Diagnostics and the cancer continuum

Thematic guides along the cancer continuum featuring:

- global key messages
- the facts – key data
- key tools and examples

Resources – example: NCCP evaluation
